

Room 20 Year 5/6

As usual the students in Room 20 are very busy with their learning and events that occur during the term!

BASF Excursion

In the last week in term two we attended a BASF Science Excursion at Curtin University. Student learnt about science and went into a lab wearing a coat and protective goggles. In the lab they went through all the equipment and safety instructions.

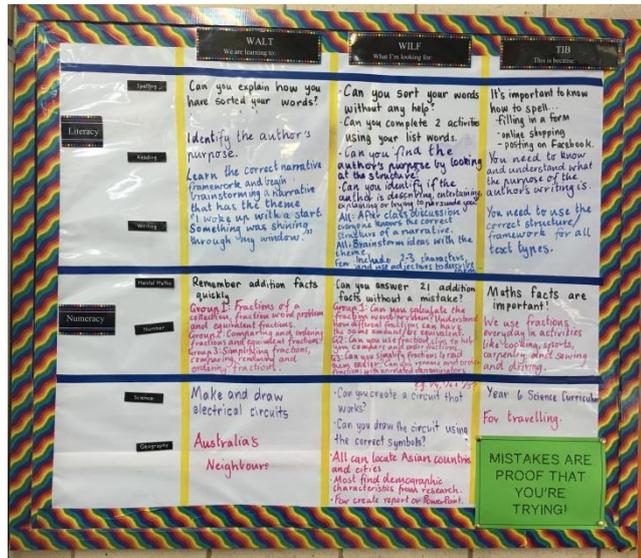

During the excursions students completed three different experiments. These were making worms and how they changed colour in cold and warm water, making slime and making their own toothpaste and comparing to store bought toothpaste. After the excursions students wrote a procedure on one of the experiments they liked the most.

WALT WILF TIB WAGOLL

In all classrooms you will see learning boards and hear WALT, WILF, TIB and WAGOLL! These are helping the students know exactly what the teacher wants to see in their work and how they can achieve to do even better in their work. Come in to take a look at our learning boards and ask the students what they mean!

LAP-A-THON

On the 28th of June Woodlupine Primary School walked, skipped, danced and ran laps of the schools oval. In total room 20 had completed 247 laps.

Bradley completed the most amounts of laps which were 19 laps, well done Bradley! We are looking forward to see how much money we will raise for the school.

STEAM Whole School Project

This term we are working on a whole school project called Christmas in a Shoebox. The whole school is designing and creating one element. Our class needs to design and create a toy that we can make using materials we already have, for example toilet paper rolls, old socks, paper, cardboards boxes, string and pop sticks. If you have any leftover materials and have no use for them like these please bring them in!

Term 3 Goals

At the beginning of each term we have a class discussion about goals we would like to achieve by the end of the term. These goals can be social and academic, for example students may want to ask more questions or receive a higher mark in a particular subject. We share our goals and discuss how we can achieve those goals and how we know we have reached that goal.
